

STOREFRONTS

Storefronts are coordinated system of extruded metal frames, glass panels, glass entrance doors, and hardware fittings. The size of the mullions are determined by the glass strength and thickness and wind load on the wall plane.

STAIRS

Steel stairs are analogous in form to wood stairs

- * steel channel section serves as carriages and stringers
- * stair tread spans the distance between the stringers
- * tread may consist of concrete filled steel pan, bar grating or a flat plate with a textured top surface
